Find the best prices on the Original Celluloid Cellophane Film at Reemay. Shop for Cellophane on eBay. Skip to main content. Lived to 83, Margaret Elizabeth William. Cellophane, also called cellophane tape or cellophane film, is a flexible, transparent or translucent sheet of an ultra-thin film of polypropylene. Cellophane was invented by the Austrian-Swiss chemist Adolph Wilhelm Gottfried Schumacher in Cellophane was the first durable plastic, making it possible to wrap around. For several decades before the discovery of cellulose in 1760, chemical compounds were known to be as impervious to water as cloth. Cellophane was developed by the Austrian-Swiss chemist Adolph Wilhelm Gottfried Schumacher in 1891. After experimenting with a number of polymers he found that cellulose reacted readily with formic acid, while the other compounds that he was studying hardened and/or cracked. Cellophane's performance against water was made clear by comparison to linen, or cotton, which is a cellulose fiber. Unlike the other fibers, cotton was found to be a poor barrier against water, and other substances such as oil or glue. Cellophane was the first durable plastic, making it possible to wrap around multiple items. One of the first applications was wrapping bar-coded tickets for collection at the theater. In cellophane tape, paper is enclosed in a thin plastic strip called cellophane, which is then wrapped around the items. The primary constituent of cellulose fiber is glucose, which is broken down into glucose units by simple hydrolysis by acid. Cellulose's ability to react with formic acid was first reported in the years leading up to cellophane's development. The first published experimental report of a cellulose derivative was a 1944 paper from Arthur F. Baker and Thomas O. Baker, in which they discuss the use of cellulose acetate films as synthetic paper. Cellophane was first created by Austrian-Swiss chemist Adolph Wilhelm Gottfried Schumacher. It was first made commercially available in as a by-product of the acetylation of cellulose in the Bayer process, a process for the production of acetic acid. The initial commercial product had low water-vapor transmission and was packaged with a piece of wax paper to allow for recycling in a post-consumer environment. Although cellophane had an immediate appeal to manufacturers, the 82157476af
